

5 TIPS FOR CREATING A MORE SECURE PASSWORD

Create a **secure password** to defend against account hacking. From social media to your bank account, security has never been more important.

Use at least 8 characters (12+ is best)

Include numbers, symbols, and uppercase and lowercase letters

Use random words and numbers (not a birthday or nickname)

Make a unique password for every account

Change passwords regularly (without reusing old ones)

Use two-factor authentication whenever possible. Log in to get a unique code on your phone and type it in to gain account access. Only someone with your phone can access your account.

Trouble making or remembering passwords? Use a reputable password manager, which allows you to create, store, and manage secure passwords.

Create A Password They Can't Crack.

Then, use tools like two-factor authentication and a secure password manager to strengthen your online security.
